

## Example of 'ideal' record when a product is first added to UK PharmaScan (in phase III or 3 years from launch in the UK)

## Assura

## Rifamilumab

## Moderate to severe rheumatoid arthritis

Drug		
Manufacturer	Assurent Pharma Ltd	
Branded name	Assura	
Generic name	Rifamilumab	
Synonyms	PC701, rifpuramab	
Indication		
Proposed	In combination with methotrexate for the	
	treatment of early arthritis.	
Final		
Abbreviated	Early rheumatoid arthritis	
Identified sub groups	Adults with RA and a symptom duration of 3-	
	6 months	
Proposed place in therapy	First-line treatment	
Stage of disease	Early RA	
Is paediatric	No	
Formulation		
Formulation	Subcutaneous injection	
Details		
Mode of action	Inhibitor of northodeconate dehydrogenase	
	(NDDH), a key enzyme involved in joint	
	destruction. First in class biological.	
Technology status	New indication	
Nature of SPC amendment		
Route	Parenteral	
Presentation	Self-administered autoinjector containing	
	300mg rifamilumab in 1mL solution.	
	Requires fridge storage.	
Proposed dose	300mg	

Proposed dosing regimen	Given by subcutaneous injection, initially
5 -5	300mg at weeks 1 and 4, then every 6
	months.
BNF Chapter	10 – Musculoskeletal and joint diseases
Disease state	Rheumatoid arthritis
Is the drug considered a personalised	No
medicine?	
Is there a companion diagnostic test?	No
Please provide details	
Current treatment options	Methotrexate; other DMARDs
Likely Comparators	As above
Has this medicine been formally selected	Unknown
for an AWMSG TDA?

General comments	
Cost and budgetary information	
Proposed average dose	300mg 6 monthly.
Place in therapy	Substitute for DMARDs
Estimated length of treatment	Ongoing
Drug cost range (per patient per year or	£30,000 and £40,000
patient per episode if less than one year)	
Drug cost notes	Excl. VAT, per patient per year
Is a Patient Access Scheme or alternative	
discount arrangement planned for this	
indication?	
Comments	
Is the technology available on a	No
compassionate basis pre-licence in the UK	
other than clinical trials?	
Service impact	Delayed radiographic progression may
	improve long-term prognosis. This may
	reduce burden on NHS.
Impact on patients and carers	It is anticipated that, if licensed, rifamilumab
	will decrease pain associated with early
	rheumatoid arthritis and potentially increase
LIV nations nanulation range	quality of life.  Between 1,000 and 1,500 per 100,000
UK patient population range UK patient population notes	RA is the most common inflammatory
On patient population notes	polyarthropathy in the UK, affecting around
	1% of the population (over 400,000 people
	in England and Wales).
	Ref: www.nice.org.uk/XX

	<del>-</del>
Estimated eligible patient population	The disease is severe in around 15% of
	patients and its peak age of onset is 40-70
	years
